# Steps to Success using ObjectiveEd's Reinforcement Learning Model

ObjectiveEd is designed to improve your student's educational outcomes by actively reinforcing your teaching. Our three-step system is designed to maximize the outcomes you and your students experience when using ObjectiveEd.

PLAN

Review ObjectiveEd's continually expanding list of skills. Identify skills that align with your student's goals and can actively supplement and reinforce your lessons.

EXECUTE

Assign the appropriate skills to your student, tailoring the skills if necessary.

Introduce your students to ObjectiveEd and the skills they are working on.

Have them practice regularly and monitor their progress weekly.

REINFORCE

After displaying mastery, remove that skill from the student's practice.

Using ObjectiveEd's suggested schedule for reinforcement, re-assign that skill when appropriate.

Have them practice regularly and monitor their progress weekly.
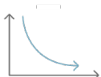

Improved Educational Outcomes
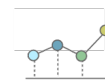

Student will master skills faster.

You will spend less time re-teaching lessons, enabling your student to progress to new lessons faster.

Skill Fade will be reduced through repeated reinforcement.

Quantifiable Results

Improved Progress Report Data
